

Print specification

A brief for producing our NFC business card. Please review and reply with a quote.

01 Product

Custom-printed NFC card in standard CR80 credit-card size (85.6 × 54 mm), PVC, with an NFC chip embedded inside the card.

02 Artwork

Two print-ready PDFs are provided — one for the front, one for the back.

- Trim size 85.6 × 54 mm with 3 mm bleed all around (files are 91.6 × 60 mm including bleed).
- Fonts are embedded; no additional prep required.

03 Printing

- Double-sided, full-color (CMYK).
- Matte finish / matte laminate.

04 NFC chip

- NTAG215 preferred (NTAG213 acceptable).
- Program the chip to open this URL: <https://anjoy.space/card>
(or supply the cards with the chip unprogrammed and we will program them ourselves).

05 Design-critical requirements

- The background is a dark, near-black full-bleed color. It must print with even coverage — no banding or roller marks; matte laminate is required.
- The QR code must stay dark modules on the light panel — do not tint, recolor, or invert it, and do not shrink it below ~20 mm. It must remain scannable.

06 What we need from you

- Price quote for a quantity of [QUANTITY] cards.
- Production turnaround time.
- A proof (physical or digital) for approval before the full run.
